

## **Project Description**

ADU Saltamontes, is an accessory unit that allows in 645.84 ft<sup>2</sup> to have two bedrooms with a shared bathroom, a living room and a dining room, it is a perfect unit to accommodate two to 4 people with the necessary requirements to be able to live together and be in harmony

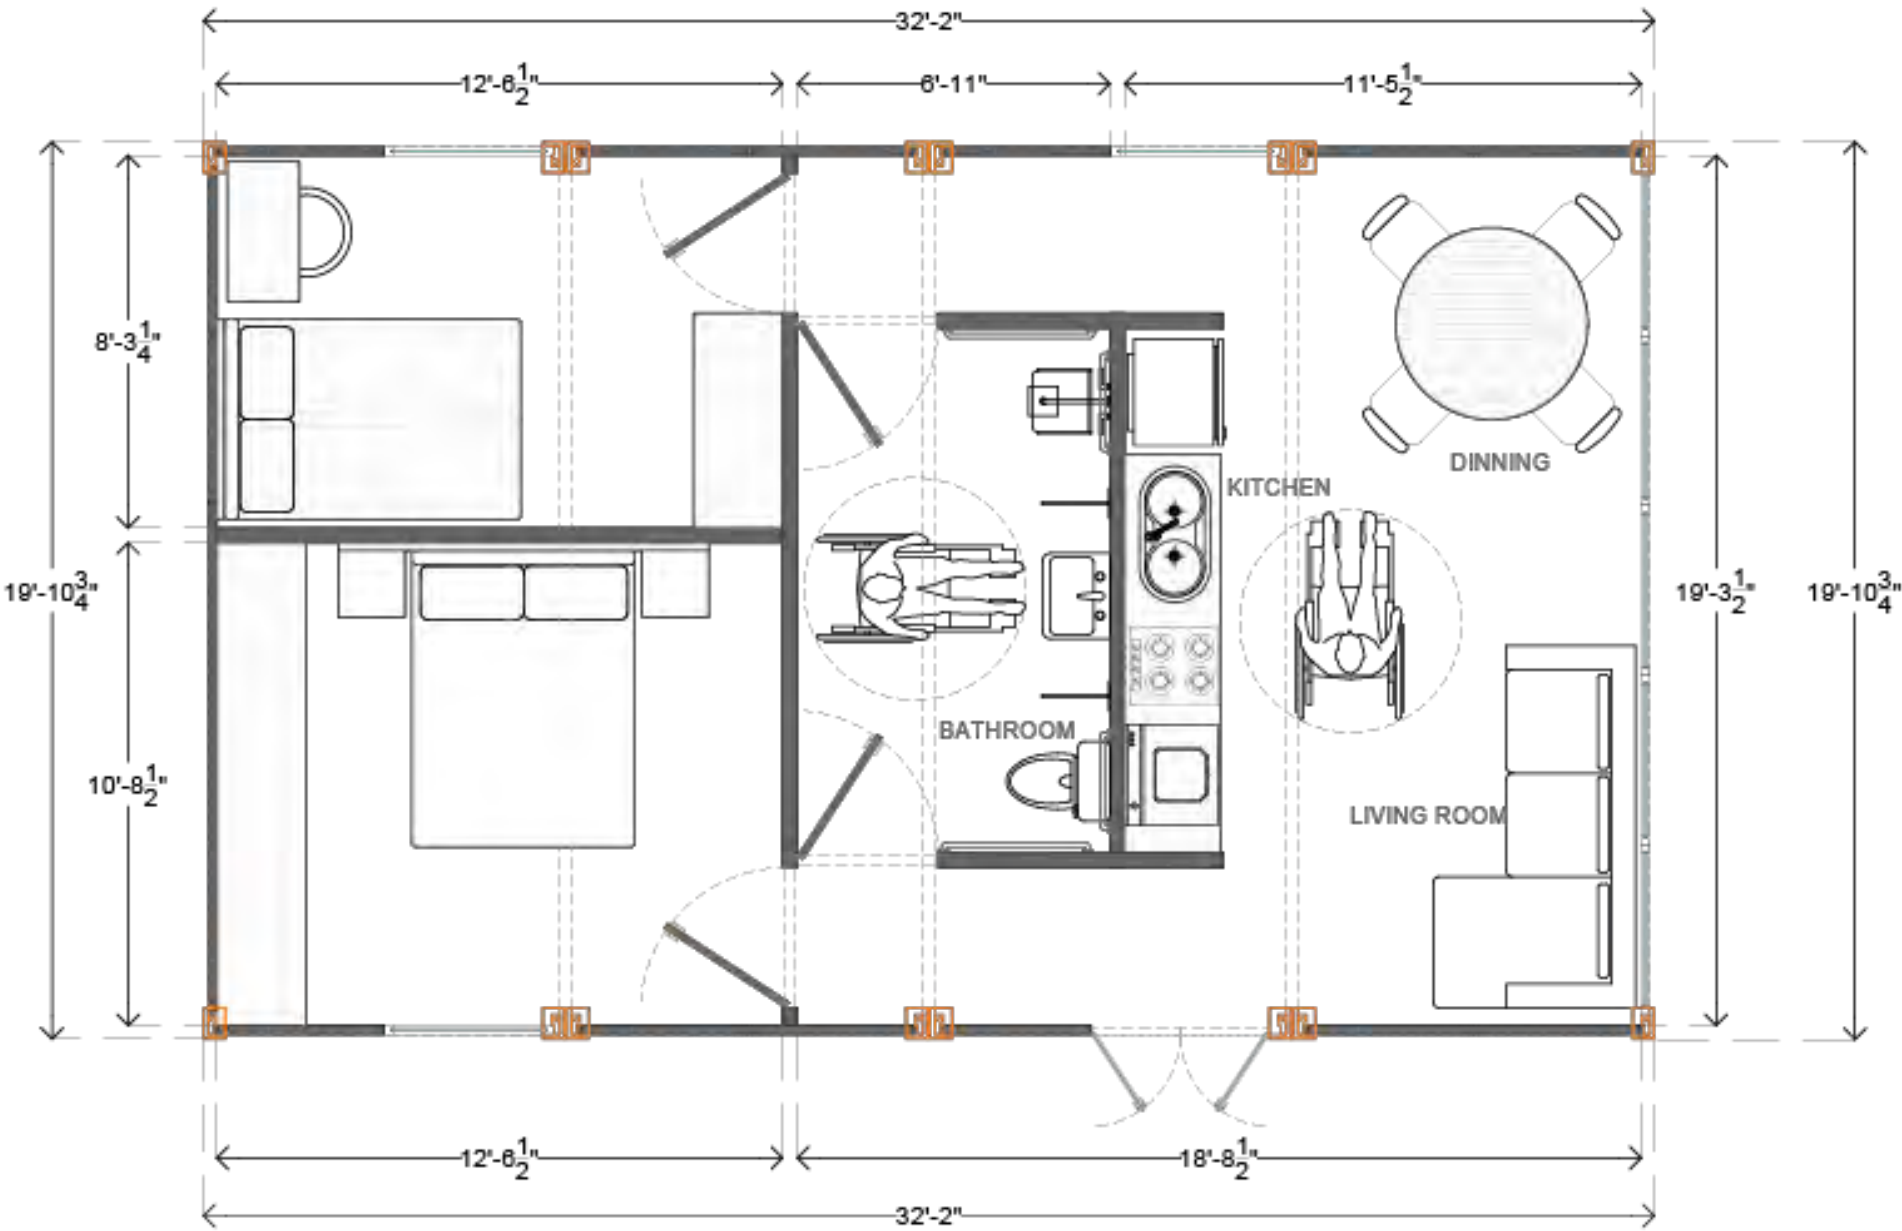

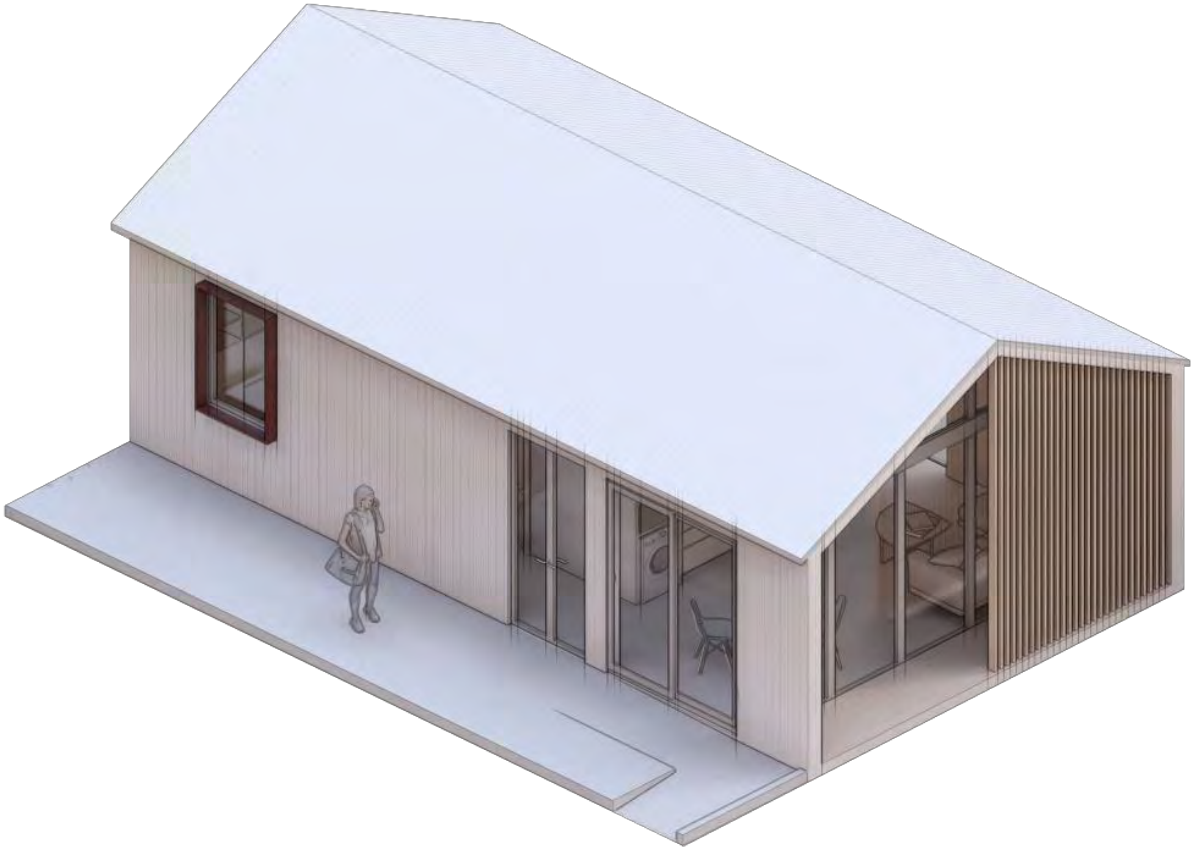

## **Project Narrative**

Our ADUs are assembleable, disassembly and relocatable. They are transported disassembled in flatpack mode, so the end customer has considerable savings in transportation and installation costs, since 5 people can completely assemble it in a single day and leave it ready with finishes. Our systems come with mineral wool insulating material, which is not flammable and allows the system configurations to be changed in multiple ways. Even these same housing modules have operated as clinics and hospitals during the pandemic, shelters, offices, mining camps, etc. . They can be integrated with materials of the highest quality, but also with materials that are friendly to the environment, our solutions and variations can be infinite, and above all, they can be adjusted on a turnkey basis. We can add solar panels, waste water containers, biodigesters and endless ecological solutions to sustain our planet
